

## Avaya IPO Partner Edition

### System Speed Dial Info

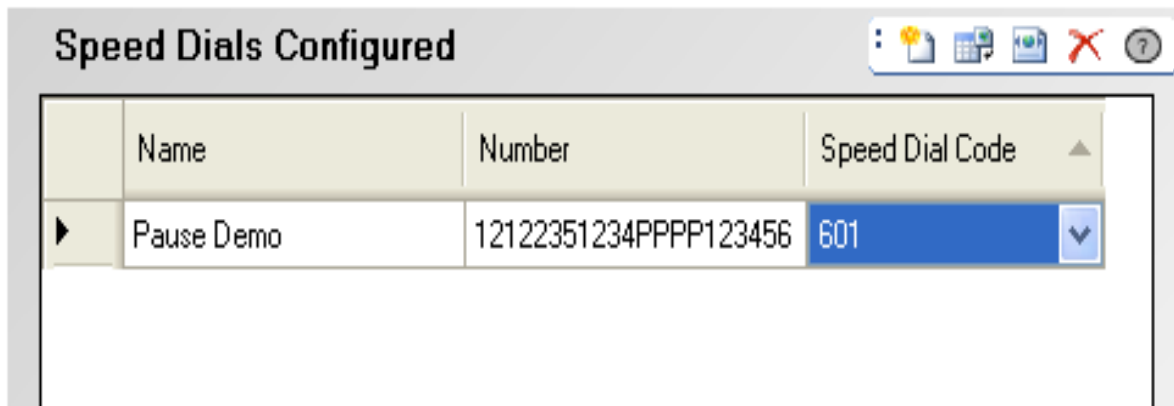

### Telquest Tech Support

Here are a few notes about the System Speed Dial on the IPO Partner system.

When you enter the telephone number, you can add a PAUSE by using a P  
You can add additional P's to increase the Pause length.  
It looks like each P adds about ¼ of a second delay.

Here we see the “Pause Demo” dialing 12122351234 PPPP 123456

12122351234 will be dialed, then after about a 1 second PAUSE, then 123456 is dialed.

	Name	Number	Speed Dial Code
▶	Pause Demo	12122351234PPPP123456	601

Unfortunately, you can't use Prefix Codes like 801, 802, 803 etc to select a specific line.  
The line sequence in the Automatic Line Selection (ALS) will always be used.

On 1400 series phones, you can press the “Feature” softkey and dial the 3 digit Speed Dial Code to make calls.

If anyone discovers any additional information, please call Bill at Telquest. 973 808-4588
