

**Avaya IP Office Partner/Quick/Basic Mode  
Mobile Twining with Phantom Extensions  
Telquest Tech Support**

This question has come up several times.

“I would like to have calls that come into our IPO Partner go directly or be transferred to a field persons cell phone and he does not have an office phone or desk.”

“Can I use one or more of the Phantom Extensions on the IPO Partner with Mobile Twining?”

Answer is: No

Mobile Twining will not work with Phantom Extensions or Unused Digital Station Ports.

It will work with Digital Stations that are connected to the system, ETR Card, Phone2, Phone8 and analog station ports on the combo card.

If you want this to work, you will need to purchase one or more of the above cards.

Call your Telquest Salesperson for more details.
