

## Avaya IP Office Essential Edition

### Button to Switch Hunt Group To Fallback AA

### Telquest Tech Support

This **example** uses Hunt Group 200 Main.

It also assumes that you have already created an AA2 Auto Attendant.

Set up the Incoming Call Route

Incoming Call Route

Click here...

Incoming Call Route		
Line Group Id	Incoming Number	Destination
0		200 Main

Select the correct  
Incoming Call Route

Add the Auto Attendant (created previously)  
that you want to use for Fallback Service  
( if you don't see it in the drop down list – type it in manually )  
Don't forget to add **AA:** before the auto attendant name

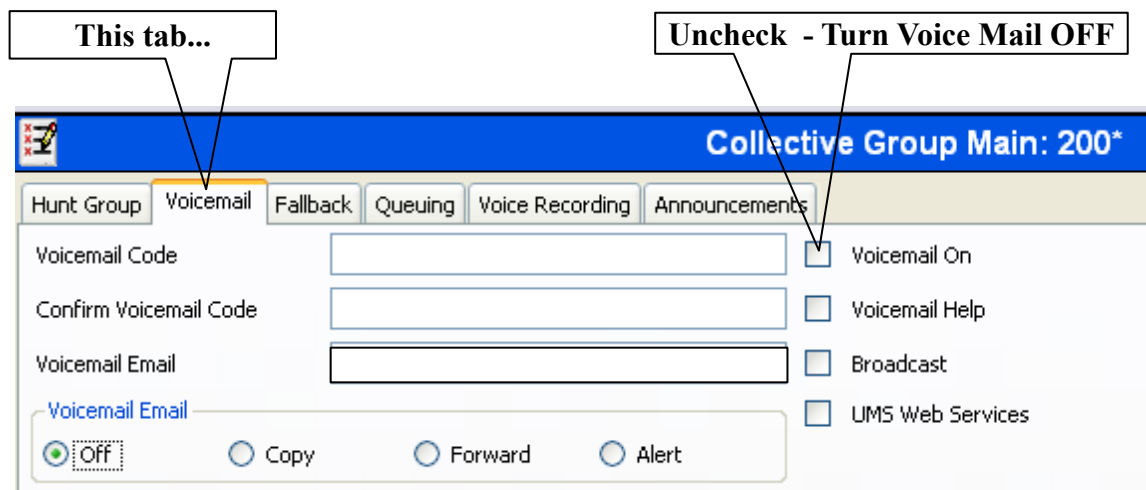

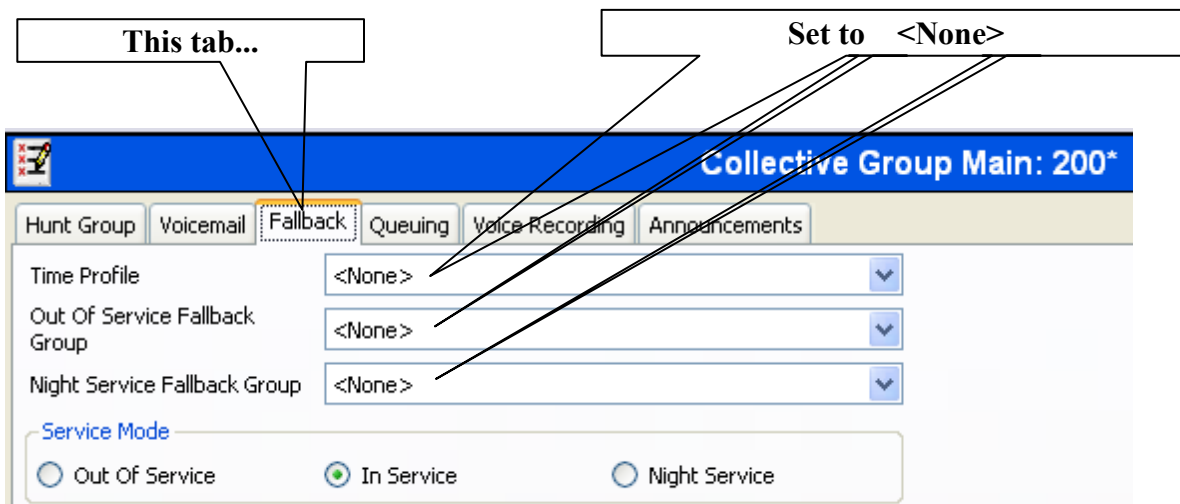

This tab...

Standard Voice Recording Destinations		
TimeProfile	Destination	Fallback Extension
Default Value	200 Main	AA:AA2
*		

This is the Day Destination for Incoming Calls

You could send the call out on a CO Line or PRI Channel  
By using a prefix code (like 9) and then the destination telephone number.  
Example: 912122351234 sends the call to 1 212 235-1234

## Set up Hunt Group 200

## Setup Fallback Button on a phone

**Click here...**

**User**

**Select a User that will have the Fallback Button**

**This tab...**

**Operator: 0**

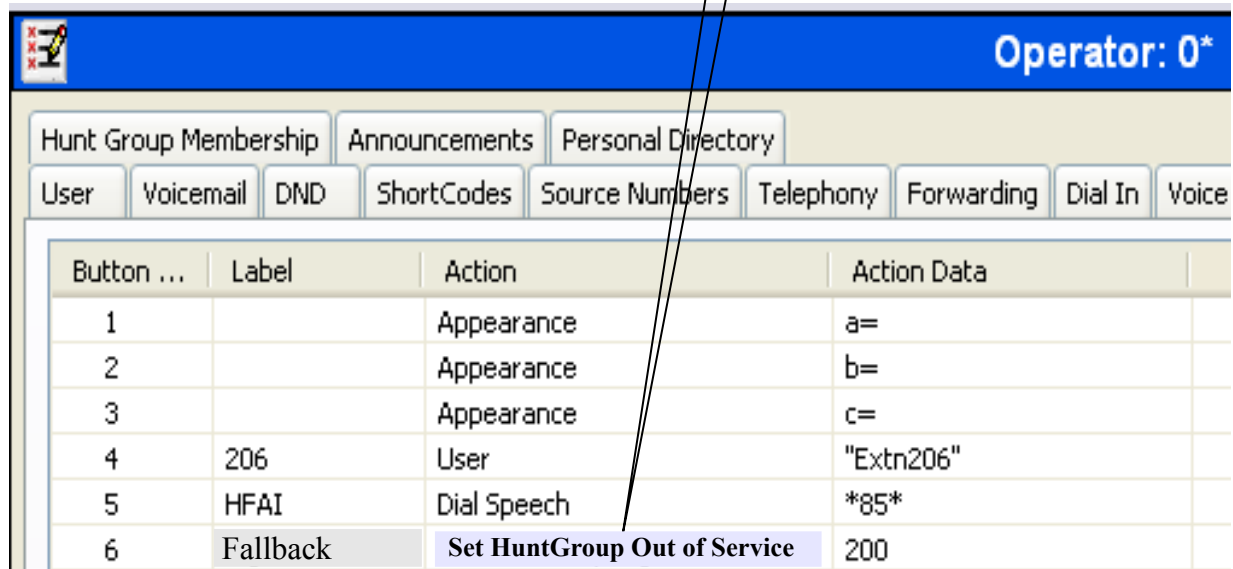

**Set Action to this**

**Label the button Fallback**

**Set Action Data to the Hunt Group 200 Main**

The screenshot shows the Asterisk Manager GUI. At the top, there's a 'User' tab with a list of users: NoUser, RemoteManager, and Operator (0). The 'Operator: 0' user is selected. Below this, there's a navigation bar with tabs: Hunt Group Membership, Announcements, Personal Directory, User, Voicemail, DND, ShortCodes, Source Numbers, Telephony, Forwarding, Dial In, Voice Recording, and Button Programming. The 'Button Programming' tab is active. In the 'Edit Button' section, the 'Button No.' is 4, the 'Label' is 'Fallback', and the 'Action' is 'Set'. The 'Action Data' is '200 Main'. A dropdown menu for 'Set' is open, showing various actions like Busy, Call, Dial, Do Not Disturb, Extension, Follow Me, Forward, Hold, HuntGroup, Miscellaneous, Relay, Suspend, and Voicemail. The 'Set' action is highlighted, and a sub-menu is open showing various 'Set' actions like Set Absent Text, Set Account Code, Set HuntGroup Out of Service, Set Inside Call Seq, Set Night Service Group, Set No Answer Time, Set Out of Service Group, Set Outside Call Seq, Set Ringback Seq, and Set Wrap Up Time. The 'Set HuntGroup Out of Service' action is highlighted.

When you are done, the Button Programming will look like this:

The screenshot shows a web-based interface for button programming. At the top, a blue header bar displays 'Operator: 0\*'. Below this is a navigation menu with tabs: 'Hunt Group Membership', 'Announcements', 'Personal Directory', 'User', 'Voicemail', 'DND', 'ShortCodes', 'Source Numbers', 'Telephony', 'Forwarding', 'Dial In', and 'Voice'. The 'Hunt Group Membership' tab is active. Below the tabs is a table with four columns: 'Button ...', 'Label', 'Action', and 'Action Data'. The table contains six rows. The sixth row is highlighted, showing '6' in the 'Button ...' column, 'Fallback' in the 'Label' column, 'Set HuntGroup Out of Service' in the 'Action' column, and '200' in the 'Action Data' column. A callout box with a pointer indicates this row.

Button ...	Label	Action	Action Data
1		Appearance	a=
2		Appearance	b=
3		Appearance	c=
4	206	User	"Extn206"
5	HFAI	Dial Speech	*85*
6	Fallback	Set HuntGroup Out of Service	200

#### Operation:

The Set HuntGroup Out of Service button is a Toggle On/Toggle Off control.

If you are using it on a phone with LEDs, then the LED will light when Fallback Service is active.

If you are using a phone with an LCD, there will be a small triangle next to Fallback when active.

When the button is lit, Hunt Group 200 will be set to Out Of Service.

This will cause the Incoming Call Route to use its Fallback Extension, which is AA:AA2 in this example.
