

Avaya IP Office Essential Edition

Night Service Button to Switch Hunt Group To Extension

Telquest Tech Support

This **example** uses Hunt Group 200 Main, Ext 0 and Analog Extension 207

Set up the Incoming Call Route

Incoming Call Route

Click here...

Incoming Call Route		
Line Group Id	Incoming Number	Destination
0		200 Main

Select the correct
Incoming Call Route

Enter the Extension
that you want to use for Night Service Ringing
I am using Extension 207 in this example...

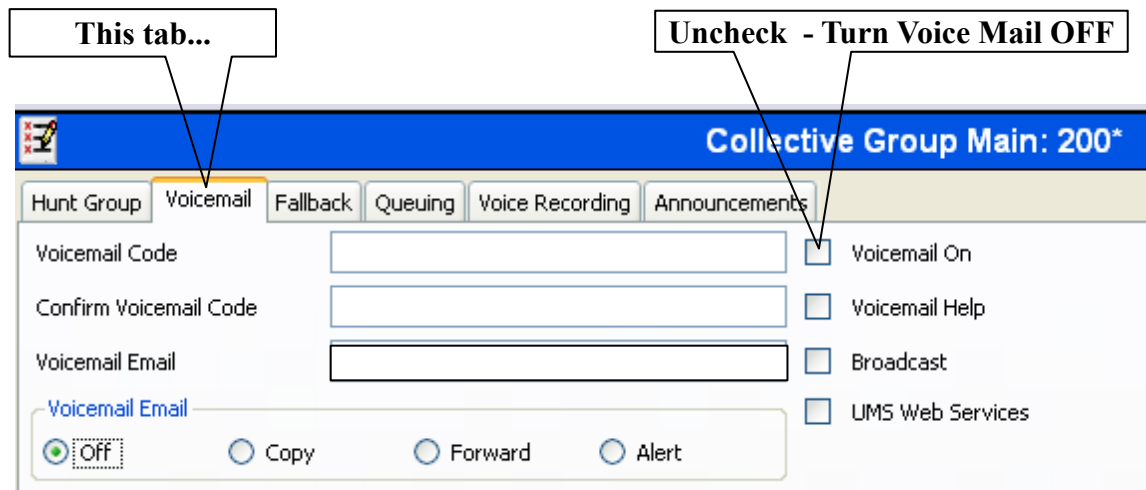

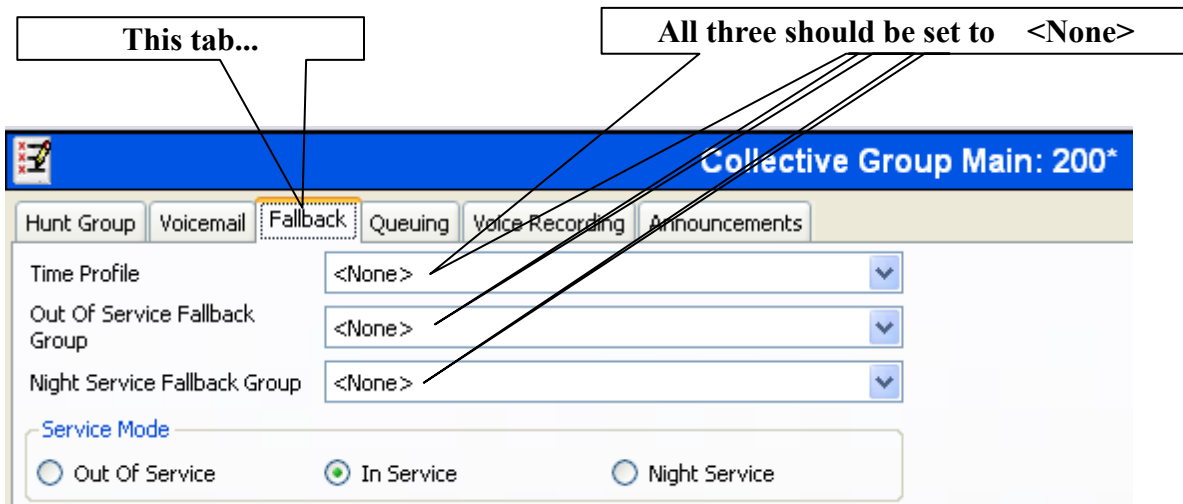

This tab...

Standard Voice Recording Destinations			
	TimeProfile	Destination	Fallback Extension
▶	Default Value	200 Main	207
*			

This is the Day Destination for Incoming Calls

This will be the Night Destination for Incoming calls

Set up the Hunt Group

Setup Night Service Button on a phone

Note: The “Night Service” button is really a “Set Hunt Group Out of Service” button.

The image shows a series of screenshots from a phone system's web interface, with callouts explaining the steps to set up a Night Service button.

Step 1: A callout points to the "User" tab in the top navigation bar, with the text "Click here..."

Step 2: The "User" tab is selected, showing a list of users. A callout points to the "Operator" user, with the text "Select a User that will have the Night Button".

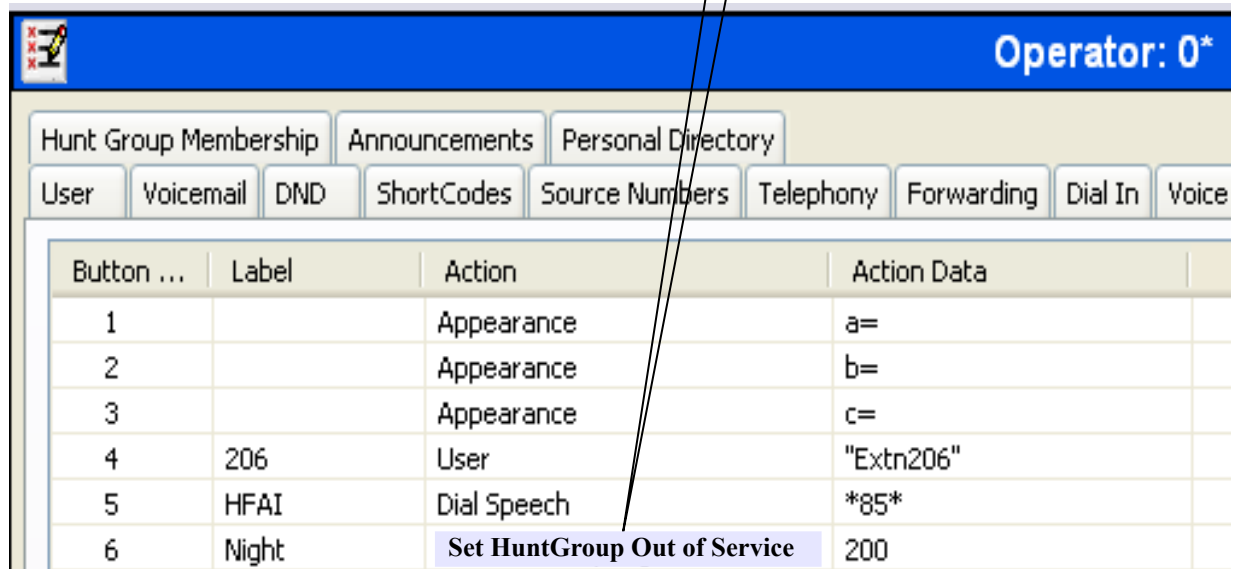

Step 3: The "Operator: 0" user profile is shown. A callout points to the "Button Programming" tab in the bottom navigation bar, with the text "This tab..."

Step 4: The "Button Programming" tab is selected, showing a list of buttons. A callout points to the "Night" button, with the text "Label the button Night".

Step 5: The "Edit Button" form is shown. A callout points to the "Action" dropdown menu, with the text "Set Action to this". The "Set" option is selected, and a secondary menu is shown with "Set HuntGroup Out of Service" highlighted.

Step 6: The "Action Data" field is shown. A callout points to the "200 Main" dropdown menu, with the text "Set Action Data to the Hunt Group 200 Main".

When you are done, the Button Programming will look like this:

The screenshot shows a web-based interface for button programming. At the top, there is a blue header bar with a small icon on the left and the text 'Operator: 0*' on the right. Below the header is a navigation bar with several tabs: 'Hunt Group Membership', 'Announcements', 'Personal Directory', 'User', 'Voicemail', 'DND', 'ShortCodes', 'Source Numbers', 'Telephony', 'Forwarding', 'Dial In', and 'Voice'. The 'Hunt Group Membership' tab is currently selected. Below the navigation bar is a table with four columns: 'Button ...', 'Label', 'Action', and 'Action Data'. The table contains six rows of data. The sixth row is highlighted in blue, and a callout box with a pointer indicates this row.

Button ...	Label	Action	Action Data
1		Appearance	a=
2		Appearance	b=
3		Appearance	c=
4	206	User	"Extn206"
5	HFAI	Dial Speech	*85*
6	Night	Set HuntGroup Out of Service	200

Operation:

The Set HuntGroup Out of Service button is a Toggle On/Toggle Off control.

If you are using it on a phone with LEDs, then the LED will light when Night Service is active.

If you are using a phone with an LCD, there will be a small triangle next to Night when active.

Note:

We are using the Action Set HuntGroup Out of Service instead of Set HuntGroup Night Service because Set HuntGroup NightService will not turn the LED on when active.

When the Night Button is lit, calls will be directed to the Night Ringer.
