

## Avaya IP Office Essential Edition

### Night Service Button to Switch Hunt Group To Mailbox

#### Telquest Tech Support

This **example** uses Hunt Group 200 Main, Ext 0 and Extension/MailBox 222

You must create the new Short Code to Direct Transfer to Mailbox first.

Set up the Incoming Call Route

Incoming Call Route

Click here...

Incoming Call Route		
Line Group Id	Incoming Number	Destination
0		200 Main

Select the correct  
Incoming Call Route

Enter 5 and the Extension  
that you want to use for Night Service

Example: To send callers to Mailbox 222, Enter 5222

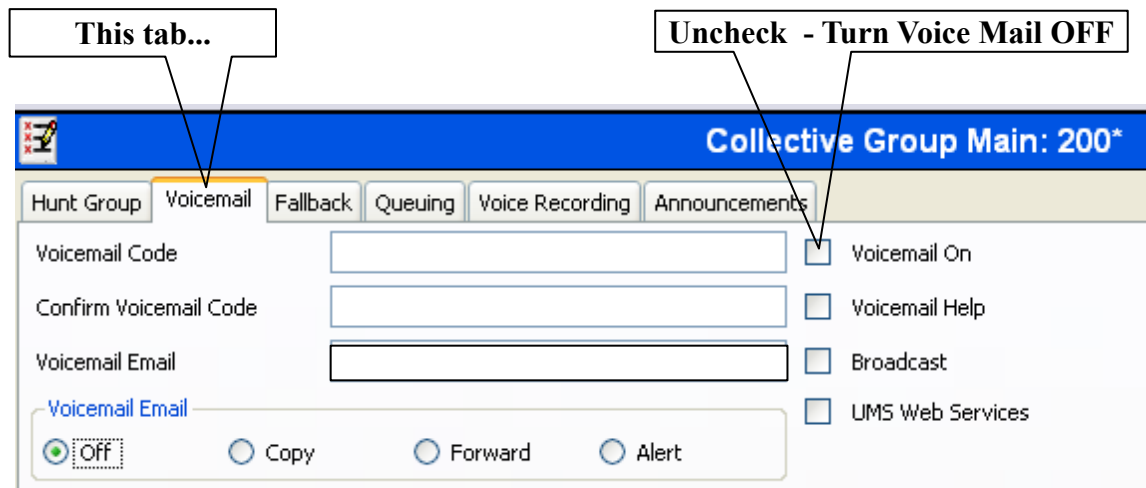

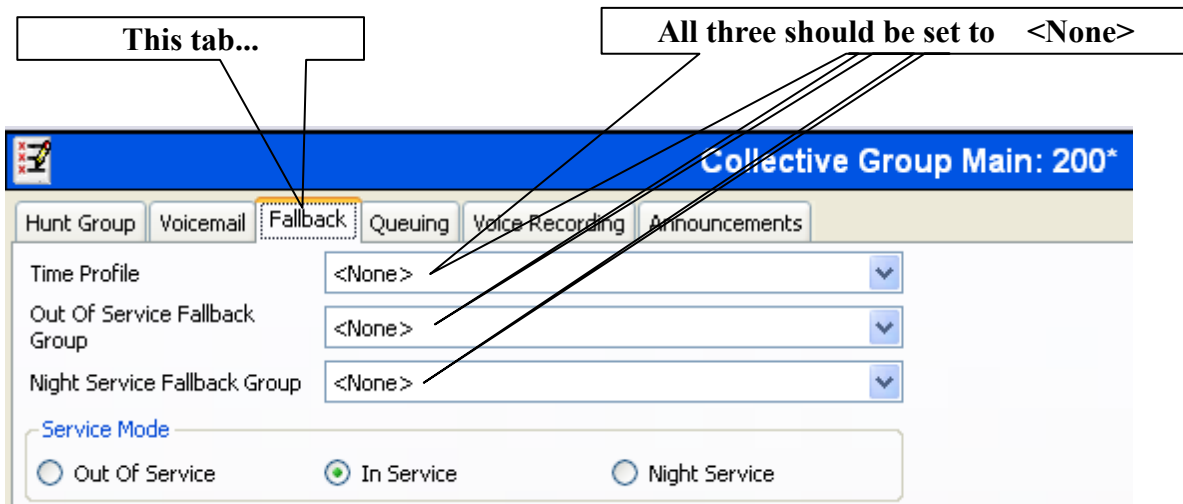

This tab...

Standard Voice Recording Destinations			
	TimeProfile	Destination	Fallback Extension
▶	Default Value	200 Main	5222
*			

This is the Day Destination for Incoming Calls

This will be the Night Destination for Incoming calls

## Set up the Hunt Group

## Setup Night Service Button on a phone

**Note: The “Night Service” button is really a “Set Hunt Group Out of Service” button.**

The image shows a series of screenshots from a phone system's web interface, with callouts explaining the steps to set up a Night Service button.

**Step 1:** A callout points to the "User" tab in the top navigation bar, with the text "Click here..."

**Step 2:** The "User" tab is selected, showing a list of users. A callout points to the "Operator" user, with the text "Select a User that will have the Night Button".

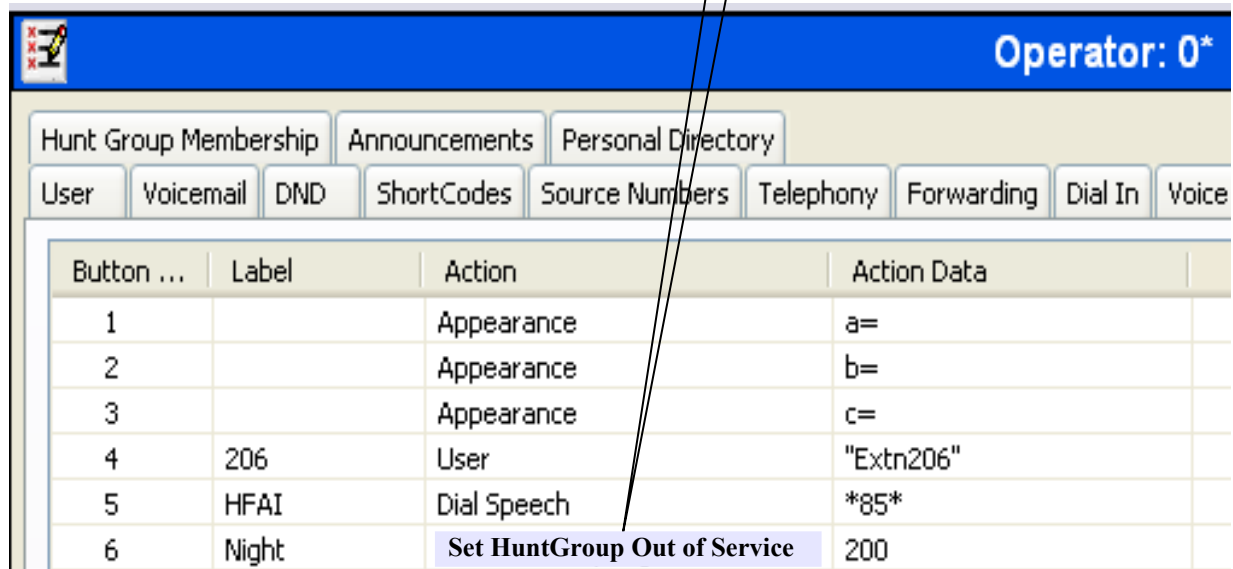

**Step 3:** The "Operator: 0" user profile is shown. A callout points to the "Button Programming" tab in the bottom navigation bar, with the text "This tab..."

**Step 4:** The "Button Programming" tab is selected, showing a list of buttons. A callout points to the "Night" button, with the text "Label the button Night".

**Step 5:** The "Edit Button" form is shown. A callout points to the "Action" dropdown menu, with the text "Set Action to this". The "Set" option is selected, and a secondary menu is shown with "Set HuntGroup Out of Service" highlighted.

**Step 6:** The "Action Data" field is shown. A callout points to the "200 Main" dropdown menu, with the text "Set Action Data to the Hunt Group 200 Main".

When you are done, the Button Programming will look like this:

The screenshot shows a web-based interface for button programming. At the top, there is a blue header bar with a small icon on the left and the text 'Operator: 0\*' on the right. Below the header is a navigation bar with several tabs: 'Hunt Group Membership', 'Announcements', 'Personal Directory', 'User', 'Voicemail', 'DND', 'ShortCodes', 'Source Numbers', 'Telephony', 'Forwarding', 'Dial In', and 'Voice'. The 'ShortCodes' tab is currently selected. Below the navigation bar is a table with four columns: 'Button ...', 'Label', 'Action', and 'Action Data'. The table contains six rows of data. The sixth row is highlighted in blue, and a callout box with a line pointing to it contains the text 'Set HuntGroup Out of Service'.

Button ...	Label	Action	Action Data
1		Appearance	a=
2		Appearance	b=
3		Appearance	c=
4	206	User	"Extn206"
5	HFAI	Dial Speech	*85*
6	Night	Set HuntGroup Out of Service	200

#### Operation:

The Set HuntGroup Out of Service button is a Toggle On/Toggle Off control.

If you are using it on a phone with LEDs, then the LED will light when Night Service is active.

If you are using a phone with an LCD, there will be a small triangle next to Night when active.

#### Note:

We are using the Action Set HuntGroup Out of Service instead of Set HuntGroup Night Service because Set HuntGroup NightService will not turn the LED on when active.

**Don't forget to use the additional Help Sheet "Short Code to Direct Transfer to Mailbox"**
