

Avaya IP Office Essential Edition

SCN Set Up Info

Telquest Tech Support

Create a new H323 Line – You will need an IP 500 Voice Networking Channels license.

This tab...

1. Enter the IP Address of the **Remote IP Office** that is located at the other end of the VPN... This is **NOT** a Network Router or Gateway Address

H323 Line - Line 20

VoIP Line Short Codes VoIP Settings

Gateway IP Address 192 . 168 . 111 . 123

Compression Mode Automatic Select

Supplementary Services IP Office SCN

SCN Backup Options

Call Initiation Timeout (s) 4

VoIP Silence Suppression

Fax Transport Support

Out Of Band DTMF

Allow Direct Media Path

2. Use this setting for Older KSU's...

2. Use this setting for Newer KSU's...

3. Leave this checked... You may need to change it later if you have One Way or No Audio between the IP Offices.

Supplementary Services H450

Avaya made changes to this screen. Supplementary Services has moved and changed to H450

Examples of Gateway IP Addresses:

Here you will enter 192.168.2.222 as the Gateway IP Address

Here you will enter 192.168.1.111 as the Gateway IP Address

Be sure that you have VCM (Voice Compression Module) Channels in EACH system.

There are 10 VCM Channels in each Combo Card.

You could also have a VCM Board in the KSU.

A Router to Router VPN is required.

Be sure that all H323 Transformations, Fixups and ALG's are turned off in the VPN.
